

Amendments to the Specification:

Please replace paragraph [0012] with the following rewritten paragraph:

[00012] Further, the second aspect of the invention may be configured such that the imaging unit is provided with an aperture. The imaging unit may change an aperture size of the aperture in synchronization with ~~flushing~~ flashing of the side turn signal light. If this configuration is adopted, it is possible to change the aperture size of the imaging unit in accordance with an illumination intensity when the side turn signal light is lit. Accordingly, it is possible to inhibit the side turn signal light within the shot image displayed on the display unit from having a dazzling appearance.
